

KomBioTa SUMMER SCHOOL 2023

Research meets Conservation Practice

Center for Biodiversity and Integrative Taxonomy (KomBioTa)

Have you ever asked yourself questions like ...

Is there a need for taxonomists
outside of science?

Which species groups do
you need to know?

What do future students
need to be prepared for?

Where do they have
career prospects?

For three days we want to get to know practical and applied species knowledge. We will get to know the most important species groups that are relevant for planning activities and learn methods of identification and recording in the field. Afterwards we want to deepen our knowledge in a practical project work, which is based on a planning procedure according to nature conservation law.

In a relaxed atmosphere, we will get to know the diverse flora and fauna at the Federsee Station of the Zoological Institute of Tübingen.

The KomBioTa Summer School **Research meets Conservation Practice** will give us the opportunity to exchange and share the joy of species knowledge outside of our own special expertise and to show professional perspectives. This way we can learn from each other and take home new know-how.

- Date: **17 – 20 July 2023**
- Location: **Forschungsstation Federsee, Bad Buchau**
- Participants: Doctoral candidates in Baden-Württemberg
- Language: German or English, as required
- Number of participants: 12
- Registration: until 31 May 2023, by email to kombiota@uni-hohenheim.de with the following information: name, university, study program, semester.
- Costs: 25 €

Join us! We are looking forward to you.
